CONTENTS TO VOLUME 16

COMPUTATIONAL PHYSICS

Issue	*Page*	
1	1	Exact ground state of finite amorphous Ising systems. S. Kobe and A. Hartwig
1	5	An integral equation method for the numerical solution of Laplace's equation without Green's function. R. Hostens and G. De Mey
1	11	Reduced matrix elements of tensor operators. R. Glass
1	19	Relativistic effects in many electron atoms. R. Glass and A. Hibbert
1	35	Fitting elastic-scattering cross sections with coupled channels. J.R. Comfort
1	43	A new approach to cross section calculations. H. Yoshiki
1	51	Finite element calculation of the anomalous skin effect in a homogeneous, unmagnetized cylindrical plasma column. T.M. Tran and F. Troyon
2	147	POL: an interactive system to analyze large data sets. N. Armenise, G. Zito, A. Silvestri, E. Lefons, M.T. Pazienza and F. Tangorra
2	159	Finite-difference solution to the Schrodinger equation for the helium isoelectronic sequence. I.L. Hawk and D.L. Hardcastle
2	167	Note on the principle of stationary phase. R.N. Bhattacharya and I. Basu
2	281	Book review. A. Hibbert
3	283	An algorithm for the storage of Condon-Shortley coefficients. F.L. Tobin

COMPUTER PROGRAMS IN PHYSICS

Issue	*Page*	
1	57	Adaptation of the new version of the reduced matrix elements (AAKP) program; inclusion of the checking of the input data. K.M.S. Saxena
1	65	An integral package for one-centre integrals over Slater-Transform-Preuss functions. E. Yurtsever
1	73	CARS spectral profiles for homonuclear diatomic molecules. W.M. Shaub, S. Lemont and A.B. Harvey
1	85	Liquid drop model deformation energies of nuclei with axial symmetry and reflection asymmetry. D.N. Poenaru and M. Ivascu
1	93	Fourier analysis with splines. A Fortran program. C. Pomponiu and M. Sararu
1	113	A subroutine for approximation by cubic splines in the least squares sense. J. Bok

COMPUTER PROGRAMS IN PHYSICS (cont.)

Issue	*Page*	
1	119	Intermediate coupling collision strengths from LS coupled R-matrix elements. R.E.H. Clark
1	129	TRIP 1: a time-dependent recombination ionisation package. J. Magill
1	139	Radial radiative flux in cylindrically symmetric arcs. P.J. Shayler and M.T.C. Fang
2	175	FREINT: an integration routine calculating Fresnel diffraction. W.J. Gruschel
2	181	Lattice dynamics of zincblende structure compounds using deformation-dipole model and rigid ion model. K. Kunc and O.H. Nielsen
2	199	A cubic spline interpolation of unequally spaced data points. J. Anderson, R.W.B. Ardill, K.J.M. Moriarty and R.C. Beckwith
2	207	An inversion of quantum mechanics. E. Lubkin and T. Lubkin
2	221	Static and dynamic muonic-atom codes MUON and RURP. G.A. Rinker
2	243	ALFVEN: a two-dimensional code based on SHASTA, solving the radiative, diffusive MHD equations. W.J. Weber, J.P. Boris and J.H. Gardner
2	267	Numerical evaluation of geomagnetic dynamo integrals (Elsasser and Adams-Gaunt integrals). W. Moon
2	273	An interpolation method for data sets with jump discontinuities. W. Moon
3	285	I. Generator of determinantal non-relativistic atomic states from spectroscopic notation. Computation of matrix elements. J.J. Labarthe
3	301	II. Generator of atomic excited terms from angular considerations. J.J. Labarthe
3	311	III. Analytic approximations of radial orbitals for multiconfigurational Hartree-Fock computations. J.J. Labarthe
3	325	IV. Approximation of numerical orbitals by Slater functions. J.J. Labarthe
3	331	A computer program for integrals of motion. A. Giorgilli
3	345	WORKER: a program for histogram manipulation. J.E. Bolger, H. Ellinger and C.F. Moore
3	363	A set of subroutines for simulation of electron-photon cascades. T. Stanev and Ch. Vankov
3	373	Calculations of generalized harmonic oscillator brackets. J. Dobes
3	383	On numerical Bessel transformation. B. Sommer and J.G. Zabolitzky
3	389	A new version of PIRK (elastic pion-nucleus scattering) to handle differing proton and neutron radii. H.O. Funsten
3	395	A new version of DWPI (inelastic pion-nucleus scattering) to incorporate microscopic form factors and differing proton and neutron radii. H.O. Funsten
